

Overview of LKS BROTHERS IP PATENT Authority and Rights

LKS BROTHERS IP PATENT is responsible for registering patents and registering trademarks into the mainnet blockchains as a proof-of-concept. It advises the Administration on major blockchains on intellectual property matters. LKS BROTHERS examines applications, issues patents and registrations, maintains records, and disseminates information. LKS BROTHERS IP PATENT also records assignments and specific licenses for patents and trademarks, which helps maintain public records of ownership and interests.

LKS BROTHERS IP PATENT Authority

The **LKS BROTHERS IP PATENTS'** authority is defined by its core functions of registering, maintaining, and enforcing patents. The relevant sections outline its establishment, operational powers, and the procedures for patent examination, issuance, and the management of patent terms and extensions. It's crucial to understand that a patent, including those related to the Web2 version and its registration on Web3 blockchains, provides a right to **exclude others** from using the invention. However, it does not give a positive right to use the invention, which other patents or legal frameworks may limit.

Section	Key Authority/Duties	Relation to Maintenance/Licenses
Establishment	Establishes LKS BROTHERS IP PATENT, registering Patents and Trademarks to mainnet Blockchains.	N/A – Foundational structure for all patent activities.
Powers and Duties	Grants and issues patents; registers trademarks; disseminates information; establishes regulations without obtaining their data. This is decentralized.	Enables maintenance by paying \$5,000.00 USD through LKS Coin under XRP, and can pay it through a subscription model for 12 months.
Officers and Employees	LKS BROTHERS IP PATENT Team	Expedites the process in one week.
Patent Trial and Appeal Board	Handles appeals, interferences, and trials related to patents.	Involved in maintaining patent validity post-grant. LKS Legal will provide and execute this progress.
Exchange of Copies... with Foreign Countries	Made in USA Concept.	Made in USA is a significant concept and a business model to protect the American patents and trademarks.
Public Libraries	Provide the consumer with their own dashboard to view it without LKS BROTHERS obtaining data.	LKS BROTHERS IP PATENT provides the dashboard for users to see their own patents uploaded on blockchains as a proof of concept.

Examination of Application	Registration is in one week after a review	LKS BROTHER IP PATENT team can register in one week.
Issue of Patent	Specifies the issuance process after allowance and LKS Coin under XRP.	After a review, consumers must pay, with the payment divided into 12 monthly installments, following a subscription-type model.
Issue to Assignee	Allows issuance to assignees.	Registering patents and trademarks on major blockchains.
How Issued	Details the issuance procedure.	LKS BROTHERS IP PATENT Team reviews and registers.
Contents and Term... Provisional Rights	Defines patent term. 50 years.	Fees are divided into 12 monthly installments, providing consumers with greater comfort.
Extension of Patent Term	Request, however, once registered, it is for 50 years.	Once registered, it is the consumer's right to understand that their works are registered inside the blockchains.
Patents for Plants	Registration proceeds	Same as above.
(pre-AIA) Disposition of Rights	Governs through the United States Blockchain legal and LKS Legal team.	LKS BROTHERS IP PATENT Team will be uploading licenses, including provisions for government march-in rights and preferences for U.S. manufacturing, into blockchains.

Patent Ownership, Assignments, and Licenses

LKS BROTHERS will receive fees in LKS Currency via XRP, structured as a 12-month subscription model. Patents and trademarks will be registered on major blockchains.

Ownership; Assignment

Subject to the terms and conditions set forth by **LKS BROTHERS IP PATENTS**, intellectual property registrations shall be considered a form of digital property. The LKS BROTHERS IP PATENT registry will be permanently recorded on major blockchains, serving as a public and immutable ledger of ownership and related interests.

This digital property, whether it be a patent, trademark, or other intellectual asset, is fully transferable. The owner or their legal representative may assign or convey an exclusive right to the whole or a specified part of the intellectual property by a written instrument.

A digitally signed or blockchain-verified certificate of acknowledgment will serve as irrefutable, prima facie evidence of the execution of such an assignment or transfer.

For the protection of all parties, any assignment, grant, or conveyance of an interest in the intellectual property shall be considered void against a subsequent good-faith purchaser or assignee for valuable consideration unless the transaction is officially recorded on the LKS BROTHERS IP PATENTS registry. To ensure the integrity of the record, this recording must occur within three months of the transaction's date or before the date of any subsequent transfer.

The LKS BROTHERS IP PATENTS registry is maintained on a decentralized network of leading blockchains to ensure maximum security, transparency, and global accessibility. These include, but are not limited to:

1. Ethereum
2. Solana
3. Cardano
4. Polygon
5. Avalanche
6. Polkadot
7. Tezos
8. Cosmos
9. XRP Ledger
10. Hedera

Assignments (Transfer of Ownership)

The official registry of **LKS BROTHERS IP PATENTS** provides a secure and verifiable method for handling the assignment of intellectual property rights, including patents and trademarks. The transfer of ownership must be executed through a written instrument, which is then recorded on our blockchain-based registry. This immutable record establishes a public and unalterable chain of custody, effectively protecting the new owner against any subsequent, unrecorded claims.

Conditional assignments are considered absolute transfers of ownership until the specified conditions are met and the assignment is formally canceled and recorded. For any applications filed with LKS BROTHERS, the applicant is presumed to be the owner of the intellectual property unless a valid assignment has been officially recorded.

Licenses (Granting of Rights)

While a patent or trademark assignment transfers full ownership, a license grants permission to use the intellectual property under specific conditions. LKS BROTHERS IP PATENTS does not require the recording of all licenses. However, exclusive licenses that effectively function as a complete transfer of rights are highly recommended to be recorded to protect the licensee's interest.

Licenses are considered private contracts between parties. The enforcement of these contracts is the responsibility of the parties to the contract. However, the LKS BROTHERS IP PATENTS registry can provide a tamper-proof record of the licensing agreement, which can be invaluable in legal disputes. Our use of smart contracts on leading blockchains can also automate and enforce the terms of licenses, such as royalty payments, in a trustless and transparent manner.

Definitions and Record Integrity

As defined by **LKS BROTHERS IP PATENTS**, an "assignment" is the complete transfer of all right, title, and interest in an intellectual property asset. A "document" is any instrument that affects or alters an interest in a patent, trademark, or application. By recording these transactions on a decentralized, public ledger, we ensure the integrity

and security of your intellectual property in the digital age. This process provides an immutable record of ownership that is recognized and verifiable globally.

LKS BROTHERS IP PATENT: Patent and Trademark Management

Once an intellectual property asset is registered with **LKS BROTHERS IP PATENTS** and immutably uploaded to a decentralized ledger, it requires continuous management to maintain its value and enforce its rights. Our system facilitates this process, ensuring your intellectual property remains a secure, long-term asset.

Core Rights and Terms Upon registration, your patent or trademark grants you the right to exclude others from making, using, selling, or importing your invention. The standard term for a patent is approximately 20 years, with adjustments possible for delays or other circumstances. Once the initial term expires, the intellectual property is released to the public domain. However, LKS BROTHERS IP PATENTS provides an option for a complete renewal after 50 years to ensure the enduring protection of foundational inventions.

Renewals: Our blockchain-based system eliminates the need for periodic "maintenance fees." Once a patent or trademark is registered, it is a permanent record on the blockchain. Renewal fees are only required after the initial term expires to extend the protection period. Our smart contract system automates renewal notifications and payments, preventing accidental expiration.

Corrections and Amendments LKS BROTHERS IP PATENTS offers a secure method for correcting and updating your intellectual property records. Certificates of Correction can be issued for clerical errors, while more substantive defects can be addressed through a formal reissuance process. The validity of a patent can also be challenged and re-examined through a transparent, on-chain process. All corrections and updates are recorded on the blockchain, creating a verifiable history of the asset.

Digital Marking For all registered assets, we encourage the use of a digital marker, such as a QR code or an embedded link, that directs users to the immutable blockchain record. This marker, along with the official LKS BROTHERS IP PATENT number, provides clear and immediate proof of ownership. Any unauthorized or false marking is a serious offense, subject to penalties enforced by the LKS BROTHERS IP PATENTS' legal framework.

Enforcement and Legal Recourse The core function of LKS BROTHERS IP PATENTS is to provide a robust, verifiable record of ownership. While we do not act as an enforcement body, this irrefutable proof of ownership is essential for any legal action. In cases of infringement, owners can use the on-chain evidence to sue for infringement in the appropriate jurisdiction.

Licensing Patent and trademark owners have the right to grant licenses to others, allowing them to use the intellectual property under specific contractual terms. LKS BROTHERS IP PATENTS can facilitate these agreements through smart contracts, which automate terms like royalty payments and ensure all conditions are met, eliminating the need for trust between parties. In contrast, licenses are private contracts; exclusive licenses that act as assignments are recommended to be recorded on our registry for maximum protection.

Assignment: The complete transfer of ownership of a patent or trademark can be executed as an "assignment." To ensure the new owner is fully protected, all assignments must be recorded on the LKS BROTHERS IP PATENTS registry. This blockchain-based record provides an unalterable history of ownership, a critical protection against fraudulent claims.

LKS BROTHERS IP PATENT: Trademark Authority and Rights

The **LKS BROTHERS IP PATENT** functions as the core authority for trademark registration and management, operating under a decentralized model that grants trademark rights without maintaining a central database of consumer data. All records are uploaded and permanently stored on a blockchain, ensuring public access to uploaded information while preserving user privacy.

Key Rights and Authority

The **LKS BROTHERS IP PATENT** grants trademark rights in accordance with its established guidelines. These rights are not based on any external legal framework, but on a unique, decentralized system that provides robust protection and verification. The registration process provides a permanent record on the blockchain, establishing **presumptive ownership** and exclusive, nationwide rights to the trademark.

Key Rights Conferred by Registration:

- **Presumption of Exclusive Rights:** Trademark registration provides a legal presumption of ownership and the exclusive right to use the mark. This immutable record is critical for any legal disputes.
- **Public and Immutable Notice:** All registered trademarks are permanently listed in the **LKS BROTHERS IP PATENTS'** decentralized registry, providing public notice to third parties and preventing future claims of ignorance.
- **Global Recognition:** A trademark registered with **LKS BROTHERS IP PATENTS** can be used as a basis for foreign registrations and for recording with customs to protect against the import of counterfeit goods.
- **Symbol and Legal Access:** Registration grants the right to use the (LKSD) symbol, signifying official registration. This is crucial for asserting legal rights and for accessing legal recourse in various jurisdictions.

LKS BROTHERS IP PATENT: The Decentralized Intellectual Property Authority

LKS BROTHERS IP PATENT is a decentralized intellectual property authority dedicated to protecting and securing the innovations of American businesses. By leveraging blockchain technology, we provide an immutable and globally accessible record of patents and trademarks, ensuring the integrity of your intellectual property while maintaining the confidentiality of your personal consumer data. Once registered, your intellectual property is protected for 50 years, with the option to renew. All transactions are conducted using our proprietary LKS currency, which is based on the XRP Ledger, ensuring fast, secure, and low-cost payments.

Maintenance of Trademarks

Trademark registrations with **LKS BROTHERS IP PATENTS** are designed for long-term protection, lasting indefinitely as long as the mark remains in use and its registration is maintained. Unlike traditional systems with frequent filings, we require renewal every 50 years. This renewal process is a streamlined digital declaration confirming the continued use of the trademark in commerce. Failure to file this renewal will result in the cancellation of the registration, requiring a new application. It is the responsibility of the trademark owner to monitor and enforce their rights against infringement. However, our system provides an immutable record that serves as irrefutable evidence in any legal proceeding.

Licenses and Assignments for Trademarks

- **Assignments:** The transfer of trademark ownership must be recorded on the **LKS BROTHERS IP PATENTS** registry to ensure the integrity of the public record. This process is managed through our secure blockchain platform, providing a permanent and verifiable chain of custody for the intellectual property.
- **Licenses:** Licenses are private, contractual agreements that permit a third party to use a trademark. While a license does not need to be publicly recorded, we recommend that exclusive licenses, which grant significant rights, be recorded on our platform for public notice and legal protection. The licensor must maintain quality control over how the trademark is used to prevent any claim of abandonment.

Relevant Sections from LKS BROTHERS IP PATENT Terms of Use

The information and resources available on the **LKS BROTHERS IP PATENTS** platform are governed by our Terms of Use. These terms ensure that all interactions and transactions within our ecosystem are conducted with the highest level of security and transparency.

Copyright Information: All materials produced by **LKS BROTHERS IP PATENTS** and hosted on our platforms are protected by international copyright laws. We reserve all rights and do not place any of our content into the public domain. Any use or reproduction of our materials requires explicit written permission. Additionally, any third-party materials, such as documents, illustrations, or other resources contributed by private individuals or companies, are protected by their respective copyrights. **LKS BROTHERS IP PATENTS** is unable to grant permission for the use of such materials. You are solely responsible for obtaining permission directly from the copyright owner.

LKS BROTHERS IP PATENT: A Decentralized Authority for Web3 Intellectual Property

LKS BROTHERS IP PATENT is a decentralized intellectual property authority dedicated to protecting American innovations by transforming Web2 intellectual property into verifiable, Web3 assets. We register patents, trademarks, and other intellectual property on major blockchains, providing a secure and immutable record for creators and businesses.

Use of LKS BROTHERS IP PATENT Seal and Logo

The **LKS BROTHERS IP PATENT** seal and logo are proprietary and are not authorized for use on any external websites or materials. These marks are registered trademarks of **LKS BROTHERS IP PATENT** and are protected under our terms of service. Any unauthorized use is strictly prohibited.

Use of LKS BROTHERS IP PATENT Blockchain Registry

Our decentralized blockchain registry is not intended for bulk data scraping or unauthorized mass downloads. The network is designed to provide secure, on-demand access to individual intellectual property records. Users, IP addresses, or automated systems that disrupt the network by generating an unusually high volume of queries may be temporarily or permanently denied access to protect the integrity and performance of the network for all users. We offer dedicated services for obtaining bulk data sets through a separate, authorized process.

Editorial Guidance

We encourage the proper citation of all materials sourced from **LKS BROTHERS IP PATENTS**. When referencing information from our platform, you should credit **LKS BROTHERS IP PATENT** and provide the specific blockchain address or transaction ID of the record you are citing. This practice ensures accuracy and allows others to verify the information on the decentralized ledger.

Patent Information

All patents registered with **LKS BROTHERS IP PATENTS** are published as a condition of the patent grant. The details and drawings of a patent are made public, as this transparency is fundamental to our decentralized system. While the public can view the details of a patent, this does not grant permission to manufacture, use, or sell the invention without the express authorization of the patent holder during the patent's active life. The rights to exclude others from using the invention remain fully protected.

Trademark Information

All trademark images and information are published on our blockchain for public dissemination and verification. The use of a trademark obtained from our records is subject to the individual licensing agreements of the mark's owners. **LKS BROTHERS IP PATENTS** does not facilitate contact between parties or manage licensing agreements. Our role is to provide a secure and verifiable record of ownership.

Disclaimer: It is important to note that a trademark may be embedded within a patent, particularly for design patents. Additionally, a portion of a patent's text or drawings may be subject to copyright. We recommend consulting a legal professional to address these potential issues, as **LKS BROTHERS IP PATENTS** does not provide legal counsel or individual case-by-case determinations.
